---	---	---

After reviewing different colors I went with an analogous color scheme with the blues and purples. I felt these colors would draw the student's eyes and keep them engaged. The hex colors I found were #0099cc, #cc00cc, and #99ffcc. I want to consistently use these throughout the pages for the kids to have a way of knowing each section such as the navigation tools always in the purple hue. For the fonts I am hoping to use something strong such as Oswald (not found on Word) and then use Century Gothic for paragraphs. I feel this will create a good contrast in the writing and guide the eye along different sections. The content on the **Home Page** will be an introduction of what the website will be used for and the learning objective along with an image focused around the multiplication skills that will be discussed.

I want to consistently use these throughout the pages for the kids to have a way of knowing each section such as the navigation tools always in the purple hue. For the fonts I am hoping to use something strong such as Oswald (not found on Word) and then use Century Gothic for paragraphs. I feel this will create a good contrast in the writing and guide the eye along different sections. The content on the **Learning Page** will have the math objective for multiplication listed. On the left side the

students will find the strategies we are discussing listed in order to follow the steps discussed. On the right hand side will be a video also covering the same strategies in order for students to watch how the steps are taken.
